

XcludeSpam Enterprise

Overview

XcludeSpam Enterprise is a very powerful spam filter that gives your organisation complete control of junk email. You can determine at user, domain or enterprise levels all the rules you require to ensure your email tool remains an effective means of communication

XcludeSpam Enterprise has been developed by Project X Technologies, a company that specialises in managing enterprise environments.

Major Benefits

- Stops spam at its point of entry, saving your company bandwidth and your employees time
- Compatible with MSDE, saving revenue
- Integrates with Active Directory, saving deployment time
- Fully configurable at enterprise, domain and user level, saving you time
- Provides email tracking and auditing to help with policy compliance
- Compatible with existing software, helping to maintain current investment

Features

- Fully web based to aid productivity
- Enterprise, Domain and User level functionality for complete flexibility
- Easy to install and configure
- Full POP3 and SMTP server capability
- Provides cascading block rules
- Auditing capabilities
- Works with MS SQL Server and MSDE
- Works with Windows 2000 Server and Window 2003 Server
- Distributable components for full deployment flexibility
- Interfaces with MS Exchange Server
- Integrates seamlessly with Active Directory
- Automated statistics functionality
- Configurable challenges
- Full contact import and contact learning mode
- Configurable quarantine reminder facility
- Full regular expression capability for flexible rules

The screenshot displays the XcludeSpam Enterprise web interface. At the top, there are filters for 'Domain' (set to 'All') and 'User' (set to 'All'). A 'Filter' button is next to the user filter. Below these are checkboxes for 'Is System Admin' and 'Is Domain Admin', both of which are checked. A 'Hello Administrator' message is displayed. A 'Summary' dropdown menu is visible, and a 'Refresh' button is on the left. On the right, there are 'Page: 1 of 1' and 'Items: 1 to 7 of 7' indicators, along with a 'Logoff' button.

Item	Description	Count
Allow Rules	Rules to allow incoming emails	31232
Block Rules	Rules to block incoming emails	23207
Allowed Emails	Emails allowed awaiting collection	5
Blocked Emails	Emails blocked awaiting deletion	1670
Quarantined Emails	Emails currently quarantined awaiting challenge response	4
Unclassified Emails	Emails currently awaiting classification	2
Challenges	Challenges that are currently outstanding	1

At the bottom of the interface, there is a footer with the following text: "Terms and Conditions | Privacy Policy | About Us | F.A.Q. | Contact Us © Copyright 2005 Project X Technologies International Ltd, www.pxti.com. All Rights Reserved. Build Version 2.0.28.4"

How XSE Works

XcludeSpam uses the challenge response method to stop your inbox from being deluged with spam. This is what happens:

Once XcludeSpam has been installed and configured, it can look at the contacts database you use with Microsoft Outlook, Outlook Express and other email clients and take from these an understanding of who you communicate with. Emails from these people will always be allowed through to you (though, of course, you can block any of them at any time). It can also monitor anyone else you send emails to and allow them to reply to you.

Anyone you have defined as being undesirable can be deleted on your email server before you even download their email, saving valuable bandwidth and end user time as these don't have to be manually browsed and deleted from the individual's inbox.

Other emails sent to you are either unsolicited spam or from senders you have not previously communicated with. These emails are set in a holding area while XcludeSpam sends the senders a polite email asking them to validate they are real senders. When a genuine replies their original email will appear in your inbox. Since spammers fake their email address, they will never see this email and thus will never be able to reply.

XcludeSpam is a completely flexible solution that will block all your spam from the moment it is installed. It is such an effective solution that Earthlink, one of the world's largest and most respected ISPs, use a similar technique.

System Requirements

Windows 2000Server SP3
Windows 2003 Server
MS SQL Server 2000 or MSDE
IIS 6

Optional

MS Exchange Server
MS Active Directory
